ALGO

- **HTML Structure:** Defines webpage structure with elements for header, budget section, expense display, toggle button, and budget form modal.

- **CSS Styling:** Style definitions in style.css for fonts, colors, and layouts.

- **JavaScript Functions**: main.js contains functions defining application behavior.

- **Event Listeners**: Set up to respond to user interactions like clicks and form submissions.

- **Opening the Modal**: Displays modal with budget and expense forms upon "+" button click.

- **Adding a Budget**: Calls getBudgetAmount on budget form submission, updates display with valid budget.

- **Adding an Expense**: Calls addExpenses on expense form submission, updates details array and display.

- **Displaying Expenses**: displayExp generates HTML to show expense list with edit and delete buttons.

- **Editing an Expense**: Calls editExpDetails on edit button click, displays edit form with pre-populated details.

- **Saving Edited Expense**: Calls getExpValue on edit form submission, updates details array and refreshes display.

- **Deleting an Expense**: Calls delExpenseDetails on delete button click, removes expense from details array and updates display.

- **Closing the Modal**: Modal is hidden on "x" button click or clicking outside the modal.

- **Calculating Total Expenses and Balance**: calcExpenses calculates total expenses, updateBalance calculates remaining balance.
